Climate Change Maps
- Sheet 019

Areas predicted to be inundated in
ARI 100 year flood
(incorporating Climate Change)
Inundated area regions (flood levels, metres AHD)

- 0.5 to 3.0
- 3.5 to 4.0
- 4.0 to 4.5
- 4.5 to 5.0
- 5.0 to 5.5
- 5.5 to 6.0
- 6.0 to 6.5
- 6.5 to 7.0
- 7.0 to 7.5
- 7.5 to 8.0
- 8.0 to 8.5
- 8.5 to 9.0
- 9.0 to 9.5

> 9.5

Probable maximum flood (PMF)
Additional areas inundated by PMF

Flood level contour
(Metres AHD)

DISCLAIMER:
This map is based on the predictions of the "Tweed Valley Flood Study (upstream 2007)" and the "Central Coast Flood Study 2008". The predicted inundation areas are only valid to areas within the Lindsay boundary of the study. Development parts of the map may also be subject to flooding. The map applies to new flooding areas; however, it may not apply to areas downstream of flooding. The map is not intended to provide any advice on the potential occurrence of flood. Flood risk variations are only determined by a licensed surveyor. This map has been prepared using the best available data, computer modelling and mapping techniques. However, the Council and the study and map is not absolute and reflects only the accuracy of the data and the techniques used. Tweed Shire Council does not warrant that this map will reflect the true flood risk and will not accept liability for any error occurring arising from reliance on this map. The information provided is ready.
