(Metres AHD)

DECLARATION
This map is based on the predictions of the "Tweed Valley Flood Study (update 2009)
(Incorporating Climate Change)" and the "Coastal Creeks Flood Study 2009".
The predicted inundated areas only apply to areas within the Model Boundary of the study.
Inundation data of the map may only be subject to flooding. The map applies to river
flooding only and does not apply to local stormwater catchment flooding. The approximate
extent of land liable to flooding has been based on survey data available at the time of
preparation. Conditions may have changed since that time. The extent of flooding the
predicted inundated areas may only be determined by a trained surveyor. This map has been
prepared using the best available data, computer modelling and mapping techniques.
The extent of flooding for
preparation. Conditions may have changed since that time. The extent of flooding for
