The predicted inundated areas only apply to areas within the Model Boundary of the study.

Uncoloured parts of the map may also be subject to flooding. The map applies to river and coastal floodplains and does not apply to land downstream of river flooding, the upgradient areas of larger floodplains and estuaries, or upgradient areas of coastal floodplains.

Conditions may have changed since that time. The nature of flooding for inland floodplains can only be determined by a licensed surveyor. This map has been prepared using the best available data, computer modelling and mapping techniques. However, the accuracy of the study and maps is not absolute and reflects only the accuracy of the available data. The user is advised to consult the local council for further flood information.

DISCLAIMER:

This map is based on the predictions of the "Tweed Valley Flood Study (Report 2003)" and the "Coral Coast Flood Study 2000".

The predicted inundated areas only apply to areas within the Model Boundary of the study.
