High Flow Maps
- Sheet 018

All 100 year flood
Hood velocity depth product

\[
\begin{align*}
\leq 0.3 & \quad \text{'Low Flow Area'} \\
> 0.3 & \quad \text{'High Flow Area'}
\end{align*}
\]

DISCLAIMER:
This map is based on the predictions of the "Tweed Valley Flood Study (update 2009)" and the "Coastal Creeks Flood Study 2009". The predicted inundated areas only apply to areas within the Model Boundary of the study. Uncoloured parts of the map may also be subject to flooding. The map applies to river flooding only and does not apply to local stormwater catchment flooding. The approximate extent of land liable to flooding has been based on survey data available at the time of preparation. Conditions may have changed since that time. The extent of flooding for individual properties can only be determined by a licensed surveyor. This map has been prepared using the best available data, computer modelling and mapping techniques, however, we cannot guarantee that the accuracy of the map and data is perfect and we do not accept liability for any loss sustained or arising from reliance upon information provided herein.
