This map is based on the predictions of the "Tweed Valley Flood Study (update 2009)" and the "Coral Coast Flood Study 2009". The predicted inundation areas only apply to areas within the Model Boundary of the study. Uncoloured parts of the map may also be subject to flooding. The map applies to non-flooded areas and does not apply to flood-damaged properties. The map is based on the "Coastal Creeks Flood Study 2009" and the "Tweed Valley Flood Study (update 2009)".

DECLARATION:
This map is based on the predictions of the "Tweed Valley Flood Study (update 2009)" and the "Coral Coast Flood Study 2009". The predicted inundation areas only apply to areas within the Model Boundary of the study. Uncoloured parts of the map may also be subject to flooding. The map applies to non-flooded areas and does not apply to flood-damaged properties. The map is based on the "Coastal Creeks Flood Study 2009" and the "Tweed Valley Flood Study (update 2009)". Conditions may have changed since that time. The nature of flooding is complex and properties are only an indication for a limited area. This map has been prepared using the best available data, computer modelling and mapping techniques. The accuracy of the study and maps is not exhaustive and reflects only the accuracy of the data in the study. The map is indicative and not exhaustive. It is not definitive and is not intended to replace professional advice. The user should use it for indicative purposes only.
