

Managing plant pests with biological controls

When Thursday 17 December 2020, 9am – 1.30pm

Where @ Summit Organics – Tyalgum

Managing invertebrate plant pests such as aphids, cabbage moths, mites and thrips is time consuming and expensive for both organic and conventional growers.

This on-farm workshop aims to help growers better understand how they can manage plant pests with biological controls, such as predatory insects, and in doing so reduce or avoid the need for chemical controls.

Presenting this workshop is Jake Byrne, a local entomologist from Biological Services Pty Ltd. Jake has extensive experience in managing plant pests in crop production and nurseries and has worked in the gardening television and radio industry.

Bookings essential:

Registrations close 10 December 2020
